

In 2022, Galetech visited 5 schools. Our education programme aims to inform and engage young people with information on wind energy, how it works and climate change.

We worked with teachers and students to develop education in the classroom and at home with use of visuals and printable documents for the student to have after the visit.

Should you require any information on our site/school visits, educational programme, or if you are looking for educational resources please contact our Community Liaison Officer on 087 1163978.
